SUMMARY

Results-driven Full-Stack .NET Developer with 6 months of hands-on internship experience at Keysoft, where I worked directly on KONTA — a live, multi-client ERP system running in production. Engaged with real clients to capture requirements and delivered custom WinForms screens and DevExpress reports tailored to their business workflows. Alongside the internship, independently developed XBook, a full-stack ERP/POS system built on ASP.NET Core, Angular 17+, and PostgreSQL. Comfortable owning features end-to-end — from client discussion and database design to frontend UI and report delivery. Seeking a full-time software development role to apply these skills and grow within a product-driven engineering team.

SKILLS

ASP.NET Core, C#, .NET Framework, WinForms, EF Core, Entity Framework Core, REST APIs, Angular 17+ (Standalone Components), TypeScript, HTML5, CSS3, PrimeNG, AG Grid v32+, PostgreSQL, Microsoft SQL Server, Npgsql, Raw SQL, DevExpress Reporting (XtraReports) — Custom Layouts, SQL-Driven Design, Print Integration, Git/GitHub, Swagger/OpenApi, Figma, NuGet, npm, Devexpress, Notion, Vercel, Canva, Excel

EDUCATION

B.Tech — Information Technology - 2025 (CGPA-6.91)

JD College of Engineering and Management, Nagpur

HSC - 2021 (85.33%)

Shahid Bhagatsingh Vidyalaya, Arni

SSC - 2019 (60.20%)

Deverao Patil Vidyalaya, Arni

EXPERIENCE

FULL STACK DEVELOPER INTERN Nov-Apr (2025-2026) 6-Month

KeySoft Creation Pvt Ltd, Surat, India

- Participated in client-facing calls to gather, analyze, and document business requirements from non-technical stakeholders.
- Developed custom WinForms screens and UI components from scratch based on individual client workflow needs.
- Designed and implemented complex DevExpress (XtraReports) reports — including print-ready layouts, custom headers, calculated fields, and group summaries.
- Wrote optimized SQL Server queries and stored procedures to power screens and report data sources.
- Managed complete feature delivery: requirement gathering → form design → backend logic → report output → client review.
- Gained practical exposure working on a live codebase with real users, tight requirements, and production constraints.

PROJECTS

XBook — Full-Stack ERP / POS Application ([Link](#))

- Architected a configurable, multi-module ERP/POS system with a master_fields-driven dynamic grid infrastructure, enabling AG Grid column definitions across Inventory, Sales, Purchasing, Accounting, and HR modules without code changes, alongside Purchase Order and Sales Order modules with grouped PostgreSQL subqueries and DevExpress reporting.
- Managed PostgreSQL database design, EF Core migrations, Dapper dynamic queries, and resolved complex bugs across AG Grid v32+, Angular change detection, backend SQL generation, and EF Core migration conflicts.

Hospital Management System ([Link](#))

- Developed a full-stack Hospital Management System using ASP.NET Core Web API, Angular, SQL Server, and Entity Framework Core with Clean Architecture and Repository Pattern.
- Implemented modules for patient management, doctor management, appointments, billing, pharmacy, and laboratory along with secure JWT authentication and role-based authorization.
- Designed and integrated RESTful APIs, dashboard analytics, PDF invoice/report generation, and responsive UI for efficient hospital operations.
